

Dial-Up Networking for Windows 95, 98 and Me

(Revised August 2011)

Introduction

In all operating systems, your computer must have a modem. A phone cord must be connected from the modem jack in the back of the computer to a phone jack in the wall, preferably with a surge protector between the modem and the wall jack.

If you have Call Waiting, it must be disabled by placing “*70” (without the quotes) before the area code to disable Call Waiting for the duration of your call.

If you must dial 9 to get an outside line, remember to place 9 before the area code.

DIAL-UP NETWORKING FOR WINDOWS 95, 98 AND ME

This guide contains information you need to set up your Windows 95, 98 and Me computer to dial into the Sailor Network using a Sailor Cruise Account or Sailor VIP Account.

Special note for Windows 95 users:

- in area codes 301 and 410 should enter their 301 or 410 local area code in the "Area code" box, and all 10 digits of the number in the "Telephone number" box.
- in area codes 240 and 443 should enter the Sailor number area code (301 or 410) in the "Area code" box and the 7 digit number in the "Telephone number" box. The number will be dialed as a long distance number but you will not be charged, just as you are not charged for local voice calls to local numbers in those area codes.
- Right click the Sailor connection icon in the "Dial-Up Networking" window and choose "Properties" from the drop down menu.
- Choose the "Server Types" folder tab.
- Un-select "netBEUI" and "IPX/SPX" from "Allowed Network Protocols" and click "OK"
- Special cases: Double click the Sailor connection icon in the "Dial-Up Networking" window. Click the "Dialing Properties" button to edit the dialing settings

Special note for Win 98 users:

- if your area code is 240 or 443 use the "Area Code Rules" button to set the connection for local dialing to 301 from 240, and 410 from 443.

IMPORTANT NOTICE: Be careful not to dial Sailor numbers that are long distance from your dialing location. Sailor is not responsible for long distance charges incurred using Sailor telephone numbers.

SET-UP

Windows 95/98 users will find Dial Up Networking in My Computer

Click Start > Settings > Dial-Up Networking

Windows ME users will find dial-up networking by clicking Start > Settings > Dial-Up Networking. See next page..

1. Double click "Make New Connection"

2. Type a name such as "Sailor PPP" in the text box labeled "Type a name for the computer you are dialing" and click on "Next."

3. Enter the area code and number for *your local Sailor Dial-up Access Number* in the boxes provided. (Please refer to your account Passport for this information.) Click "Next."

4. Click "Finish."

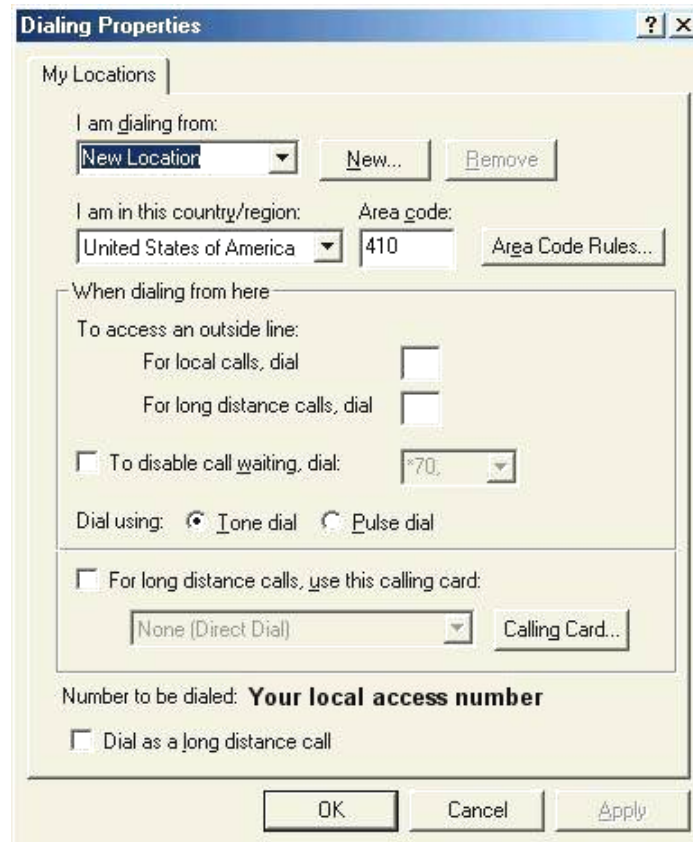

5. Special dialing circumstances: In the Dial-Up Networking Window, double click on the icon for connection you just created to display the "Connect to" window.

Click on the "Dial properties" button to edit the dialing settings

- if your area code is 240 or 443, to set "Area Code Rules"
- if you must dial 9 for an outside line,
- if you use Call Waiting, to choose "*70," to disable Call Waiting for the duration of your call.

IMPORTANT NOTICE: *Be careful not to dial Sailor numbers that are long distance from your dialing location. Sailor is not responsible for long distance charges incurred using Sailor telephone numbers.*

CONNECTING

1. Click Start > Settings > Dial-Up Networking
2. Double click the icon for your Sailor connection to display the "Connect to" window.
3. Type your User ID and Password in the boxes provided. (Refer to your Passport for this information.)
4. Click the "Connect" button to place your call.

NEED ASSISTANCE? Call the Sailor Help Desk at 410-396-4636.

Sailor Dial-Up Access Numbers

Please be careful to only use numbers that are Local Calls from your location.

If you use a number that requires "1" before the Area Code to make a connection, you may incur Long Distance charges. Sailor is not responsible for Long Distance charges incurred dialing Long Distance into Sailor dial access numbers.
